Excludes:			
Initial consultation	x	x	x
Consultation bloods & Virology	x	x	x
Recipient medication	x	x	x

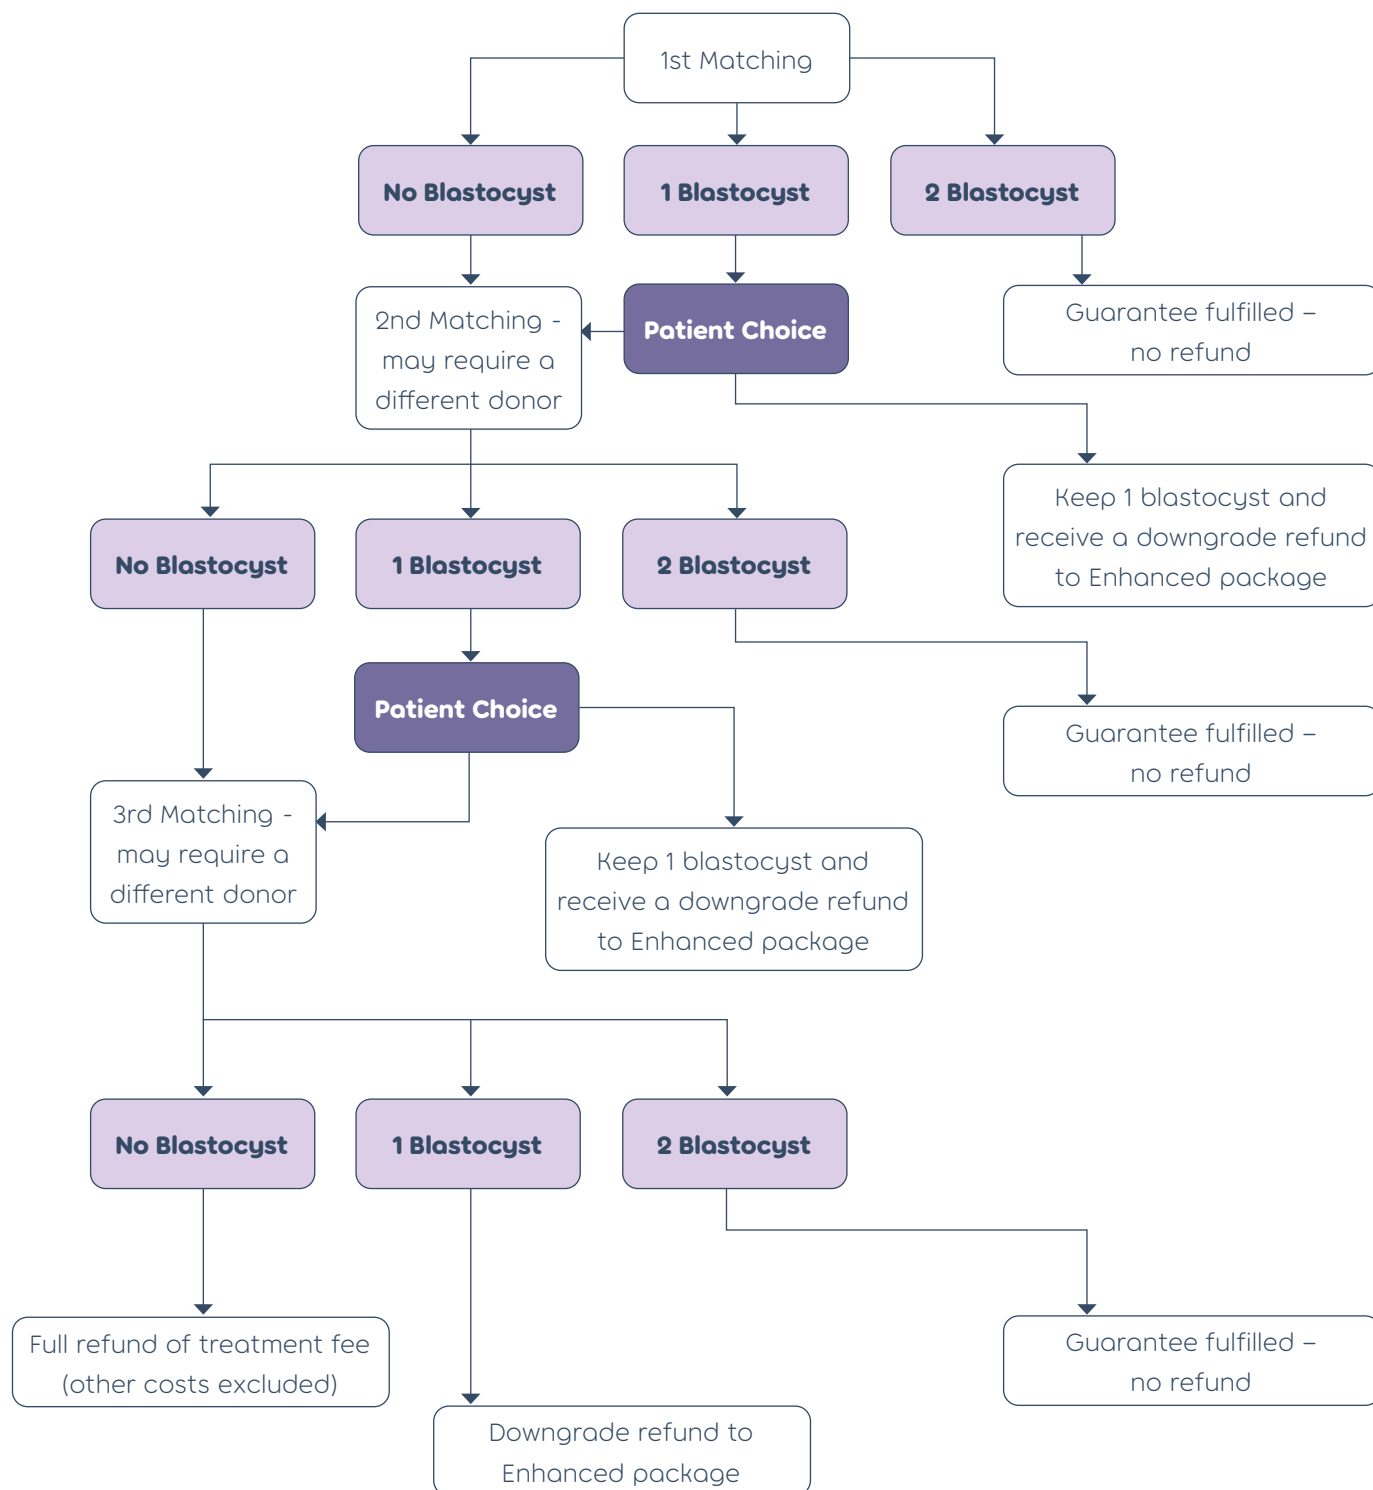

How the Guarantee Works

DIVF Essential & Enhanced

How the Guarantee Works

DIVF Advanced

Terms & Conditions

General

- Fresh or frozen donor eggs will be used based on donor availability for matching the recipient's requests.
- Eggs sourced from an external bank may incur a transport fee.
- All refunds exclude additional costs already incurred (e.g. medication, timelapse).
- Recipients are eligible for initial treatment up to and including 48 years of age / for FET up to and including 50 years of age subject to Fertility consultant approval.

Sperm Requirements for Guarantee Packages

- TMSC $\geq$ 4 million motile sperm per ejaculate.
- Final eligibility must be approved by our doctor or embryologist.

Payments & Fees

- £1,000 non-refundable reservation fee, payable after the initial consultation.
- This fee is deducted from the total treatment cost.
- Donor recruitment or egg matching begins only after this payment is received.
- The remaining balance is due once frozen eggs are allocated
- A final invoice adjustment will be made if services differ from those originally planned.

Refund Policy

- The reservation fee is non-refundable.
- A full refund (minus the reservation fee) applies if treatment is cancelled before frozen eggs are thawed
- Other fees are refunded only if the associated services are not used.

Important Information

- It is BCRM policy to create embryos from donor eggs and freeze these embryos at the blastocyst stage (an embryo that has developed 5-6 days after fertilisation) in advance of transfer.
- Blastocyst guarantees apply to the number of blastocysts created that are suitable for freezing based on the standard laboratory grading criteria.
- Blastocyst guarantees apply to the number of blastocysts created, not to the number of genetically normal (euploid) embryos.
- If PGT testing does not identify any blastocysts suitable for transfer, the guarantee is still considered fulfilled
- The included frozen embryo transfer must take place within 6 months of embryo freezing.
- Transfers after this period are charged at standard clinic rates.
